

TECHNE

Prime Pro qPCR reagent kits

Part of the Prime Pro qPCR system

400 qPCR reagent kits available

Probe based chemistry

Read on FAM and VIC channels

Human Pathogen kits

Food and Water testing

Veterinary and agriculture Pathogens

Biothreat detection kits

Available with or without Mastermix

qPCR reagent kits from Techne

Techne offer a range of over 400 Prime Pro DNA/RNA pathogen detection kits for a wide variety of applications. The kits contain all of the components required to run 150 tests. To use the kits, simply combine the components and introduce your DNA/RNA before placing into your real time PCR instrument. For your convenience, each kit is available with and without the mastermix component. The kit components are lyophilised (freeze dried) so can be shipped and stored at ambient temperature. They are stable for 18 months. Suitable for:

- Molecular Biology research
- Health agencies
- Hospitals
- Defence agencies
- Research
- Veterinary/Agriculture
- Food agencies
- Parasitology
- Water testing
- For general laboratory and research only
- Standards and testing agencies

DNA Kits

Each Prime Pro DNA reagent kit employs the same experimental setup, amplification protocol and interpretation of results.

Plate setup includes:

1. Internal extraction control, VIC labelled.
2. Endogenous control, FAM labelled.
3. Positive control, also used for standard curve, FAM labelled.

DNA Protocol

	Step	Time	Temperature
1 cycle	Enzyme activation	10 minutes	95°C
50 cycles	Denaturation	10 seconds	95°C
	Data collection*	60 seconds	60°C

* Fluorogenic data for the target, positive control and endogenous control is collected during this step through the FAM channel. Fluorogenic data for the internal extraction control should be collected during this step through the VIC channel (or the Cy5 channel if using a Roche LightCycler 1.0 or 1.5)

DNA Results

Pathogen	Internal control	Negative control	Positive control	Interpretation
+	+	-	+	Positive result
+	-	-	+	
-	+	-	+	Negative result
-	-	-	-	Experiment fail
+	+	+	+	

Kit contents

- Lyophilised primer and probe mix
- Lyophilised master mix
- Lyophilised master mix resuspension buffer
- Lyophilised ROX Ampule
- High-copy DNA for standard curve
- Internal extraction control DNA
- Beta-actin endogenous control
- RNase/DNase free water
- Reverse transcriptase (RNA kits only)

Advantages

- Kits packed in a convenient foil pouch
- Lyophilised - (freeze dried)
 - No dry ice shipping required
 - Reduced shipping costs
 - Ship to hot climates
 - Ship at the weekend
- Simple protocol, identical for each kit
- 150 reactions per kit.
 - Low cost per test
- qPCR can be days faster, more accurate and more quantifiable than traditional microbiological methods
- Suitable for any qPCR instrument with FAM/VIC detection

RNA Kits

Each Prime Pro RNA reagent kit employs the same experimental setup, amplification protocol and interpretation of results.

Plate setup includes:

1. Internal extraction control, VIC labelled.
2. Endogenous control, FAM labelled.
3. Positive control, also used for standard curve, FAM labelled.

RNA Protocol

	Step	Time	Temperature
1 cycle	Reverse transcription	10 minutes	55°C
	Enzyme activation	8 minutes	95°C
50 cycles	Denaturation	10 seconds	95°C
	Data collection*	60 seconds	60°C

* Fluorogenic data for the target, positive control and endogenous control is collected during this step through the FAM channel. Fluorogenic data for the internal extraction control should be collected during this step through the VIC channel (or the Cy5 channel if using a Roche LightCycler 1.0 or 1.5)

RNA Results

Pathogen	Internal control	Negative control	Positive control	Interpretation
+	+	-	+	Positive result
+	-	-	+	
-	+	-	+	Negative result
-	-	-	-	Experiment fail
+	+	+	+	

Human pathogens

Human pathogen detection kits form the largest part of the Prime Pro reagent range. This segment includes kits for pathogenic bacteria, viruses, protozoa and parasites.

- Respiratory infections
- Sexually transmitted infections
- Herpes infections
- Hepatitis viruses
- Human papillomavirus
- Gastrointestinal infections
- Vector-borne diseases
- Meningitis
- Periodontal infections
- Influenza H1N1

Without Mastermix	With Mastermix	Description
Respiratory Infections		
TKIT10005	TKIT10005M	DNA, Adenovirus Type B
TKIT10006	TKIT10006M	DNA, Adenovirus Type C
TKIT10007	TKIT10007M	DNA, Adenovirus Type F&G
TKIT10003	TKIT10003M	DNA, Ajellomyces capsulata
TKIT11016	TKIT11016M	DNA, Chlamydomyces pneumoniae
TKIT11017	TKIT11017M	DNA, Chlamydomyces psittaci
TKIT11015	TKIT11015M	DNA, Cryptococcus neoformans
TKIT10028	TKIT10028M	DNA, Enterobacter cloacae
TKIT11023	TKIT11023M	DNA, Geosmithia argillacea
TKIT10044	TKIT10044M	RNA, H1N1 influenza
TKIT11026	TKIT11026M	RNA, Avian Influenza A virus Subtype H7N9
TKIT10040	TKIT10040M	DNA, Haemophilus influenzae
TKIT10046	TKIT10046M	DNA, Human Bocavirus genomes
TKIT10049	TKIT10049M	RNA, All Group 1 Coronavirus genomes
TKIT10050	TKIT10050M	RNA, All Group 2 Coronavirus genomes
TKIT10035	TKIT10035M	RNA, Influenza Type A M1
TKIT10036	TKIT10036M	RNA, Human Influenza Type A M2
TKIT10043	TKIT10043M	RNA, Human Influenza A virus Subtype H1
TKIT10045	TKIT10045M	RNA, Human Influenza A virus Subtype H3
TKIT10037	TKIT10037M	RNA, Human Influenza Type B
TKIT10064	TKIT10064M	RNA, Human Metapneumovirus
TKIT10066	TKIT10066M	RNA, Human Parainfluenza virus Type 1
TKIT10067	TKIT10067M	RNA, Human Parainfluenza virus Type 2
TKIT10068	TKIT10068M	RNA, Human Parainfluenza virus Type 3
TKIT10069	TKIT10069M	RNA, Human Parainfluenza virus Type 4A
TKIT10070	TKIT10070M	RNA, Human Parainfluenza virus Type 4B
TKIT10082	TKIT10082M	DNA, Human Polyomavirus 6
TKIT10083	TKIT10083M	DNA, Human Polyomavirus 7
TKIT10084	TKIT10084M	DNA, Human Polyomavirus 9
TKIT10085	TKIT10085M	RNA, Human Rhinovirus Subtype 14
TKIT10086	TKIT10086M	RNA, Human Rhinovirus Subtype 16

TKIT10087	TKIT10087M	RNA, Human Rhinovirus Subtype 1B
TKIT10088	TKIT10088M	RNA, Human Rhinovirus Subtype 29
TKIT10089	TKIT10089M	RNA, Human Rhinovirus Subtype 9
TKIT10090	TKIT10090M	RNA, Human Rhinovirus All subtypes (generic)
TKIT10097	TKIT10097M	DNA, Klebsiella pneumoniae
TKIT07012	TKIT07012M	DNA, All Legionella species
TKIT10102	TKIT10102M	DNA, Legionella pneumophila
TKIT11027	TKIT11027M	DNA, Leptospirosis
TKIT10114	TKIT10114M	DNA, Merkel cell polyomavirus
TKIT10115	TKIT10115M	DNA, Methicillin-resistant Staphylococcus aureus
TKIT10108	TKIT10108M	DNA, Moraxella catarrhalis
TKIT08017	TKIT08017M	DNA, Mycobacterium avium subspecies paratuberculosis
TKIT10113	TKIT10113M	DNA, Mycobacterium tuberculosis complex
TKIT11044	TKIT11044M	DNA, Mycobacterium avium
TKIT10113	TKIT10113M	DNA, Mycobacterium tuberculosis complex
TKIT10112	TKIT10112M	DNA, Mycoplasma pneumoniae
TKIT10133	TKIT10133M	RNA, Respiratory Syncytial virus
TKIT10134	TKIT10134M	RNA, Respiratory Syncytial virus A
TKIT10135	TKIT10135M	RNA, Respiratory Syncytial virus B
TKIT11035	TKIT11035M	RNA, SARS coronavirus
TKIT10100	TKIT10100M	DNA, Legionella longbeachae
TKIT07017	TKIT07017M	DNA, Simkania negevensis
TKIT10155	TKIT10155M	DNA, WU polyomavirus
TKIT10098	TKIT10098M	DNA, KI polyomavirus

Sexually transmitted Infections

TKIT10016	TKIT10016M	DNA, Candida albicans
TKIT10021	TKIT10021M	DNA, Chlamydia trachomatis
TKIT10039	TKIT10039M	DNA, Haemophilus ducreyi
TKIT07008	TKIT07008M	RNA, Hepatitis A virus
TKIT10047	TKIT10047M	DNA, Hepatitis B virus
TKIT10091	TKIT10091M	DNA, Herpes simplex Type 1 (HHV1)
TKIT10092	TKIT10092M	DNA, Herpes simplex Type 1 and 2 (HHV1&2)
TKIT10093	TKIT10093M	DNA, Herpes simplex Type 2 (HHV2)

Biothreat

A small list of detection kits aimed at detecting some particularly harmful viruses and bacteria such as Rift Valley Virus and E.coli 0157. If your test is not available contact PCRmax or your local dealer to enquire about getting a custom kit made for you.

Biothreat

TKIT03001	TKIT03001M	DNA, Bacillus anthracis
TKIT11001	TKIT11001M	DNA, Burkholderia mallei
TKIT11010	TKIT11010M	DNA, Burkholderia pseudomallei
TKIT11017	TKIT11017M	DNA, Chlamydomyces psittaci
TKIT07004	TKIT07004M	DNA, All Clostridium perfringens species
TKIT08002	TKIT08002M	DNA, Coxiella burnetii

TKIT08014	TKIT08014M	DNA, Francisella tularensis
TKIT10044	TKIT10044M	RNA, H1N1 influenza
TKIT03004	TKIT03004M	RNA, Rift Valley Fever virus
TKIT02002	TKIT02002M	DNA, Toxigenic subspecies of Vibrio cholerae
TKIT12096	TKIT12096M	DNA, Vaccinia virus

Food and water

qPCR is the fastest and most accurate way to screen water and food for pathogens. Prime Pro qPCR reagents also facilitate speciation and allergen detection.

- Speciation of meat and fish
- Pathogen contamination
- Allergen detection
- GMO detection/quantification

Labelling of genetically modified organisms is now mandatory in many regions, including the European Union. To guarantee consumer choice between GM and non-GM products, screening of samples is performed by PCR amplification of regulatory sequences frequently introduced into genetically modified organisms. Cauliflower mosaic virus is commonly used as a means of GM detection

Without Mastermix	With Mastermix	Description
Meat Speciation kits		
TKIT06024	TKIT06024M	DNA, Bos taurus (bovine/beef)
TKIT06022	TKIT06022M	DNA, Bubalus bubalis (buffalo)
TKIT06032	TKIT06032M	DNA, Felis catus (cat)

Do more with less with Techne Prime Pro 48

48 wells. Less DNA.

Due to lack of dependence on large sample volumes, the Techne Prime Pro 48 is validated for between 5-20ul meaning you can do more tests with your precious DNA sample and cut reagent costs in half.

48 wells. Less Waste.

Due to patented thermal technology and 5X higher uniformity than a typical 96 well system, there is no dependency on unnecessary replicates to mitigate poor system performance. This means less sample waste and more valid experiments.

48 wells. Less time.

A single peltier and low block mass enables fast ramp rates. Comfortably perform 40 cycles in 40 minutes. Zero settle time is required to hit precise temperatures allowing optimised 40 cycle runs in 20 minutes. Process more samples per day than a typical 96 well qPCR system which can take 80 minutes per run.

Get more for less...

- Higher uniformity than a 96 well system
- Higher quality data than a 96 well system
- Higher throughput than a 96 well system
- Faster ramp rate than a 96 well system
- Shorter run times than a 96 well system
- Use less DNA than a 96 well system
- Needs fewer replicates than a 96 well system
- Lower running costs than a 96 well system
- Lower price than a 96 well system

...with a 48 well block

Duplicates vs Triplicates

$\pm 0.1^{\circ}\text{C}$ uniformity means Prime Pro 48 requires fewer replicates than a conventional 96 well system

Prime Pro 48 wells HIGH uniformity - Run duplicates	Conventional 96 wells LOW uniformity - Run triplicates
---	--

Prime Pro 48 is capable of running 40 cycles in 40 minutes

24 samples Run time 40 minutes	32 samples Run time 1 hour 20 minutes
---	--

Fewer replicates and faster cycling allows Prime Pro 48 to process more samples than a standard 96 well system

36 samples per hour	24 samples per hour
----------------------------	----------------------------

Results from multiple instruments can be combined

More **Less**

Triplicates vs Triplicates

Even when running the same plate set up you can do more with Prime Pro 48

Prime Pro 48 wells Run triplicates	Conventional 96 wells Run triplicates
--	---

Prime Pro 48 is capable of running 40 cycles in 40 minutes

16 samples Run time 40 minutes	32 samples Run time 1 hour 20 minutes
---	--

Faster cycling time means more samples can be run in an Prime Pro 48 than a standard 96 well system

27 samples per hour	24 samples per hour
----------------------------	----------------------------

Results from multiple instruments can be combined
